

Dust Catcher for Table Saw & Router Tables

Bits #9027

Included Parts:

- 1 Dust Catcher Bag (with 12 snap heads attached)
- 12 pieces Phillips head snap receptors

Assembly:

Line up snaps on the Dust Catcher Bag with the base of your stand. Place a mark on stand above snap head. Do this for all snaps. You may measure the distance between snaps and layout accordingly.

Use a 5/32" drill bit to drill 12 holes for receptors.

Screw the 12 Phillips head snap receptors into the base of the stand with the snap end facing outward.

Always snap the bag on by hand. Any other method may break snaps.

Operation:

Check that all snaps are secured in place.

Begin use of machine.

Never fill bag more than 2/3 full. Too much weight will cause bag to fail. Check often.

Wear dust mask and safety goggles to empty bag.

Maintenance:

Inspect that snaps & receptors remain firmly in place.

Check for tears. A torn bag should not be used.
